Zikos, G. K., 157

SUBJECT INDEX TO VOLUME 50

Adaptive Mesh Refinement for One-Dimensional Three-Phase Flow with Phase Change in Porous Media, 231
Applying the Hopfield Neural Network to the Solution of the Temperature Distribution Field in Heat Conduction Problems, 535

Curve Monte Carlo Method for Radiative Heat Transfer in Absorbing and Scattering Gradient-Index Medium, A, 181

Development of a Locally Analytic Prolongation Operator in the Two-Grid, Three-Level Method for the Navier-Stokes Equations, 517
Direct Design Solution of the Elliptic Grid Generation Equations, 217

Enthalpy Model for Simulation of Dendritic Growth, An, 59
Estimation of Heat Transfer Coefficient in Two-Dimensional Inverse Heat Conduction Problems, 375

Geometric Parameterization and Multiobjective Shape Optimization of Convective Periodic Channels, 425
Global Mass Correction Scheme for the Level-Set Method, A, 455
Global Matrix-Free Finite-Element Scheme for Natural Convection in a Square Cavity with Step Blockage, 353

Improved Continuous Sensitivity Equation Method for Optimal Shape Design in Mixed Convection, An, 1
Improved Solution of Electrodynamics Equations for Corona Discharge Using Explicit Artificial Viscosity, An, 315

Large-Eddy Simulation of a Swirling Diffusion Flame Using a SOM SGS Combustion Model, 41
Large-Eddy Simulation of Heavy-Particle Transport in Turbulent Channel Flow, 285
Lattice Boltzmann Study of Bubble Dynamics, 333
Least-Squares Spectral Element Method for Radiative Heat Transfer in Semitransparent Media, 473
Limits of Validity of the Low Magnetic Reynolds Number Approximation in MHD Natural-Convection Heat Transfer, On the, 157

Natural-Convection Benchmark Problem in Non-Newtonian Fluids, On a, 193
Numerical Study of Fluid Flow and Heat Transfer Over a Series of In-Line Noncircular Tubes Confined in a Parallel-Plate Channel, 97
Numerical Study of Thermal Behavior of a Wind Turbine Nacelle Operating in a Nordic Climate, 121

Object-Oriented Development of Inverse Heat Conduction Code Adaptable to Various Configurations, 269

Parallel-in-Time Simulation of Two-Dimensional, Unsteady, Incompressible Laminar Flows, 25
Parallel Solution to the Radiative Transport in Three-Dimensional Participating Media, A, 79
Parametric Study of an improved Gamma Differencing Scheme Based on Normalized-variable Formulation For Low-Speed Flow With Artificial Compressibility Technique, 561
Projection and Simple Methods for Single-Fluid and Multiple-Fluid Incompressible Unsteady Flows—General Formula, 395

SPH Numerical Modeling for Ballistic-Diffusive Heat Conduction, 499
Stability of Natural Convection in Superposed Fluid and Porous Layers Using Integral Transforms, 409
Solution of Heterogeneous Heat Conduction Problems by a Diffuse Approximation Meshless Method, On the, 491

Using Event Location in Finite-Difference Methods for Phase-Change Problems, 143

CONTENTS TO VOLUME 50

CONTENTS Vol. 50, No. 1

1 An Improved Continuous Sensitivity Equation Method for Optimal Shape Design in Mixed Convection **R. Duvigneau, D. Pelletier, and J. Borggaard**

25 Parallel-in-Time Simulation of Two-Dimensional, Unsteady, Incompressible Laminar Flows **J. M. F. Trindade, and J. C. F. Pereira**

41 Large-Eddy Simulation of a Swirling Diffusion Flame Using a SOM SGS Combustion Model **L. Y. Hu, L. X. Zhou, and J. Zhang**

59 An Enthalpy Model for Simulation of Dendritic Growth **D. Pal, J. Bhattacharya, P. Dutta, and S. Chakraborty**

79 A Parallel Solution to the Radiative Transport in Three-Dimensional Participating Media **Önder Yıldız and Hasan Bedir**

CONTENTS Vol. 50, No. 2

97 Numerical Study of Fluid Flow and Heat Transfer Over a Series of In-Line Noncircular Tubes Confined in a Parallel-Plate Channel **Haitham M. S. Bahaidarah, M. Ijaz, and N. K. Anand**

121 Numerical Study of Thermal Behavior of a Wind Turbine Nacelle Operating in a Nordic Climate **A. Smaïli, C. Masson, S. R. Taleb, and L. Lamarche**

143 Using Event Location in Finite-Difference Methods for Phase-Change Problems **Beathe Furenes and Bernt Lie**

157 On the Limits of Validity of the Low Magnetic Reynolds Number Approximation in MHD Natural-Convection Heat Transfer **I. E. Sarris, G. K. Zikos, A. P. Grecos, and N. S. Vlachos**

181 A Curve Monte Carlo Method for Radiative Heat Transfer in Absorbing and Scattering Gradient-Index Medium **Xin-Lin Xia, De-Peng Ren, and He-Ping Tan**

CONTENTS Vol. 50, No. 3

193 On a Natural-Convection Benchmark Problem in Non-Newtonian Fluids **William L. Barth and Graham F. Carey**

217 Direct Design Solution of the Elliptic Grid Generation Equations **A. Ashrafizadeh and G. D. Raithby**

231 Adaptive Mesh Refinement for One-Dimensional Three-Phase Flow with Phase Change in Porous Media **Xiao-Hong Wang, Michel Quintard, and Gilles Darche**

269 Object-Oriented Development of Inverse Heat Conduction Code Adaptable to Various Configurations **Sun Kyoung Kim**

CONTENTS Vol. 50, No. 4

285 Large-Eddy Simulation of Heavy-Particle Transport in Turbulent Channel Flow **A. Elhami Amiri, S. Kazemzadeh Hannani, and F. Mashayek**

315 An Improved Solution of Electrodynamics Equations for Corona Discharge Using Explicit Artificial Viscosity **Majid Molki, Tannaz Harirchian, and Vijaya Lakshmi Chitta**

333 Lattice Boltzmann Study of Bubble Dynamics **Ismail Oguz Kurtoglu and Ching-Long Lin**

353 Global Matrix-Free Finite-Element Scheme for Natural Convection in a Square Cavity with Step Blockage **K. Murugesan, D. C. Lo, D. L. Young, C. M. Fan, and C. W. Chen**

375 Estimation of Heat Transfer Coefficient in Two-Dimensional Inverse Heat Conduction Problems **Han-Taw Chen and Xin-Yi Wu**

CONTENTS Vol. 50, No. 5

395 Projection and Simple Methods for Single-Fluid and Multiple-Fluid Incompressible Unsteady Flows—General Formula **Ming-Jiu Ni**

409 Stability of Natural Convection in Superposed Fluid and Porous Layers Using Integral Transforms **S. C. Hirata, B. Goyeau, D. Gobin, and R. M. Cotta**

425 Geometric Parameterization and Multiobjective Shape Optimization of Convective Periodic Channels **E. Nobile, F. Pinto, and G. Rizzetto**

455 A Global Mass Correction Scheme for the Level-Set Method **Y. F. Yap, J. C. Chai, T. N. Wong, K. C. Toh, and H. Y. Zhang**

473 Least-Squares Spectral Element Method for Radiative Heat Transfer in Semitransparent Media **J. M. Zhao and L. H. Liu**

CONTENTS Vol. 50, No. 6

491 On the Solution of Heterogeneous Heat Conduction Problems by a Diffuse Approximation Meshless Method **H. Sadat, N. Dubus, L. Gbahoué, and T. Sophy**

499 SPH Numerical Modeling for Ballistic-Diffusive Heat Conduction **Fangming Jiang and Antonio C. M. Sousa**

517 Development of a Locally Analytic Prolongation Operator in the Two-Grid, Three-Level Method for the Navier-Stokes Equations **Tony W. H. Sheu and R. K. Lin**

535 Applying the Hopfield Neural Network to the Solution of the Temperature Distribution Field in Heat Conduction Problems **S. Deng and Y. Hwang**

561 Parametric Study of an improved Gamma Differencing Scheme Based on Normalized-variable Formulation For Low-Speed Flow With Artificial Compressibility Technique **Khai-Ching Ng, Mohd.-Zamri Yusoff, and Eddie-Yin-Kwee Ng**
